

LAB 01: BASIC PRINTS

In this lab you will be discovering and practicing ways to print information to the screen. Complete each problem in its designated method.

EXERCISES

1. Print the following to the screen: `Hello World`
2. Write the first letter of your name like the example below. Feel free to use any symbol you like, including emojis. To access emojis on a PC, press windows + semi-colon or windows + period. On a Mac, press ctrl + cmd + space. For advanced, print all of your initials or use only 1 print statement.

```
****
*   *
*   *
****
**
*  *
*  *
*   *
```

3. Print the following ASCII art to the screen. Hint: remember to use your escape sequences. For advanced, use only 1 print statement.

```
\\  //
 \\ //
  \\//
  //\\
 //  \\
//  \\
```

4. Copy and paste one of the method headers from problems 1 – 3. Change the name to `problem4()`. Inside, use two separate print statements to print the following line. Hint: do not forget to call this method from main.

```
Comp Sci still looks like "Magic"
```
